HR Attrition

Why Are Employees Leaving?

Department: All | Gender: All | Salary Band: All

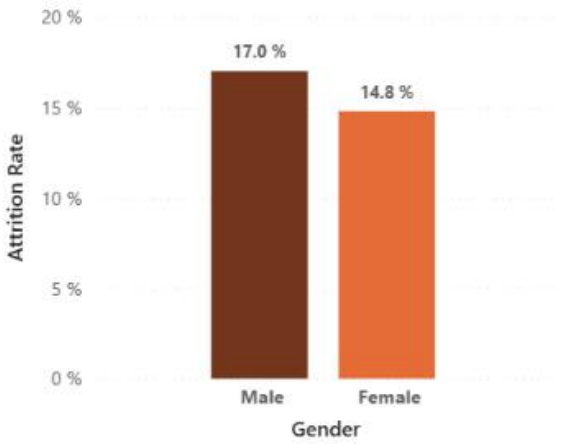

Overview | Deep Dive

Clear all slicers

Attrition by Age Group

Age Group	Headcount	Employees Left	Attrition Rate
18 to 25	123	44	35.8 %
26 to 35	606	116	19.1 %
36 to 45	468	43	9.2 %
45 to 60	273	34	12.5 %
Total	**1470**	**237**	**16.1 %**

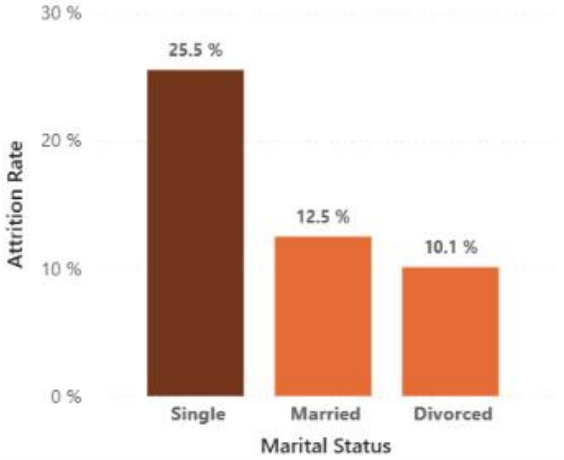

Attrition Rate by Gender

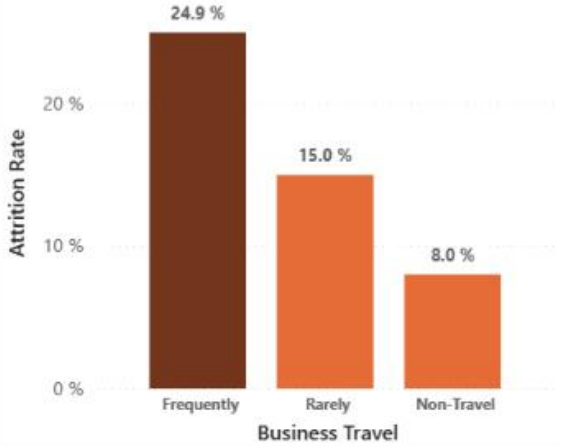

Attrition by Education Field

Education Field	Headcount	Employees Left	Attrition Rate
Human Resources	27	7	25.9 %
Technical Degree	132	32	24.2 %
Marketing	159	35	22.0 %
Life Sciences	606	89	14.7 %
Medical	464	63	13.6 %
Other	82	11	13.4 %
Total	**1470**	**237**	**16.1 %**

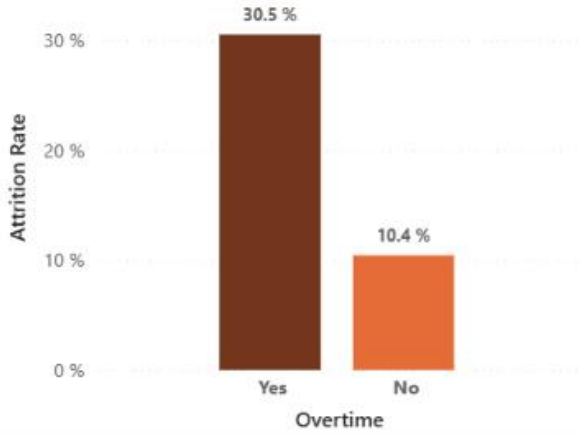

Attrition by Marital Status

Attrition by Business Travel

Attrition by Overtime

A 16.1% attrition rate hides very different levels of risk

The headline number is useful, but the differences between employee groups are more actionable.

ATTRITION RATE	EMPLOYEES LEFT	TOTAL HEADCOUNT	LEAVERS' TENURE	AVERAGE INCOME
16.1%	**237**	**1,470**	**5.1 years**	**6,503**
237 of 1,470 employees	Exits in the dataset	Employees represented	Average years at company	Monthly income

The clearest signals

Attrition is not evenly spread across the workforce. The following three segments show highest attrition:

Overtime

30.5% Employees working overtime

vs 10.4% without overtime

Age-Group

35.8% employees aged 18-25

highest attrition rate by age-group

Job-Role

39.8% Sales Representatives

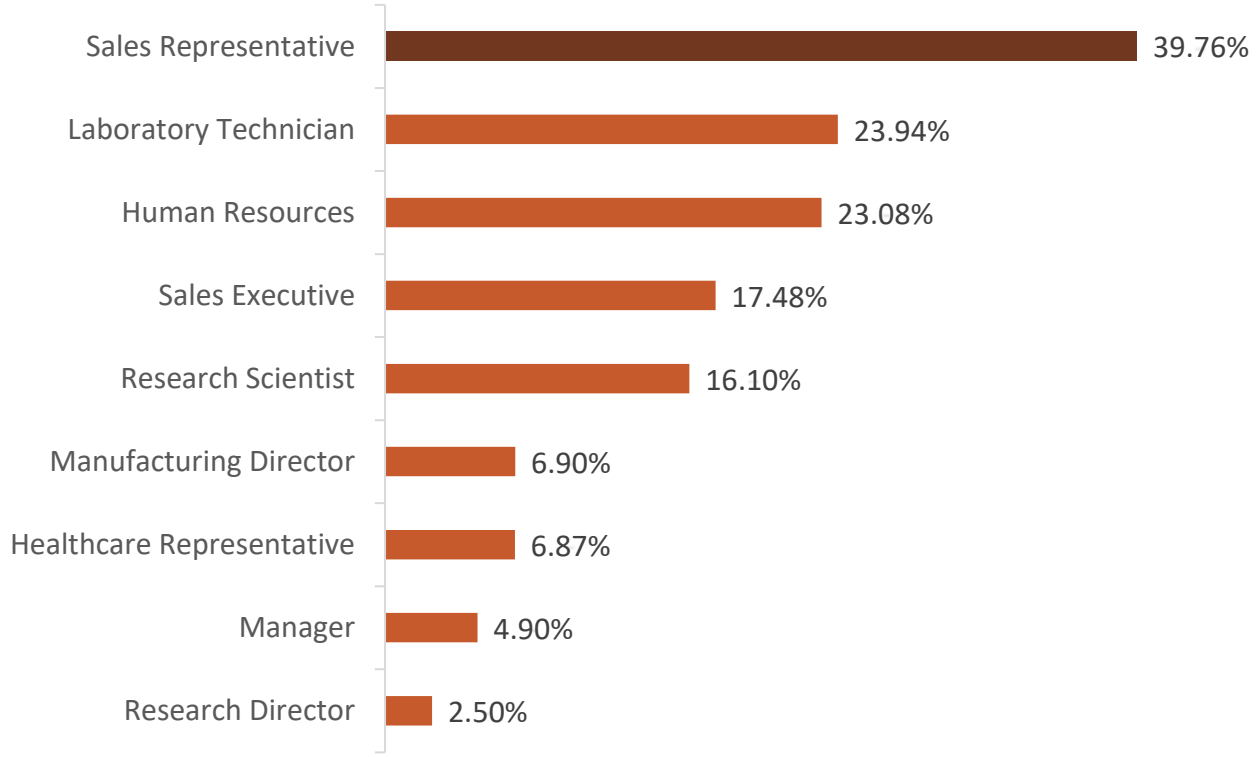

highest attrition rate by job role

These are the risk signals to investigate, not proof that any one factor causes employees to leave.

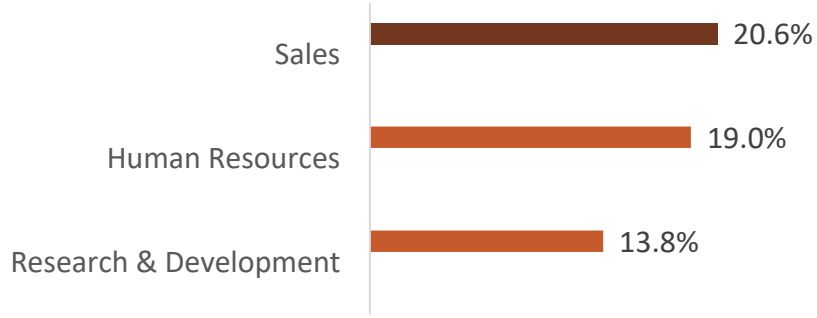

The highest exit rate is not the same as the highest exit count

Role-level rates point to specific hotspots; department-level rates put the totals in context.

Attrition rate by job role

Attrition rate by department

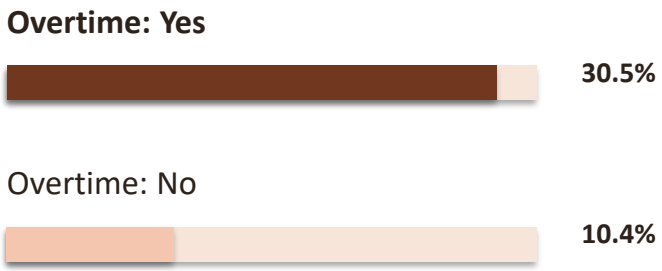

Counts and rates tell different stories

- Sales Representatives have the highest role-level rate: 39.8% (33 exits from 83 employees).
- Laboratory Technicians account for the most number of exits within a role: 62 (23.9%).
- R&D has the most exits by department (133) in number, but the lowest department rate (13.8%).

Three segments show clear attrition gaps

These differences are large enough to investigate, but the dashboard alone cannot establish the cause.

Overtime

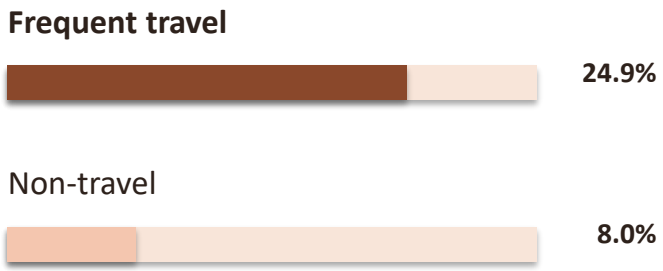

Workload, staffing and overtime patterns by role, needs a check.

Monthly income band

Compare income bands alongside job level, role and tenure.

Business travel

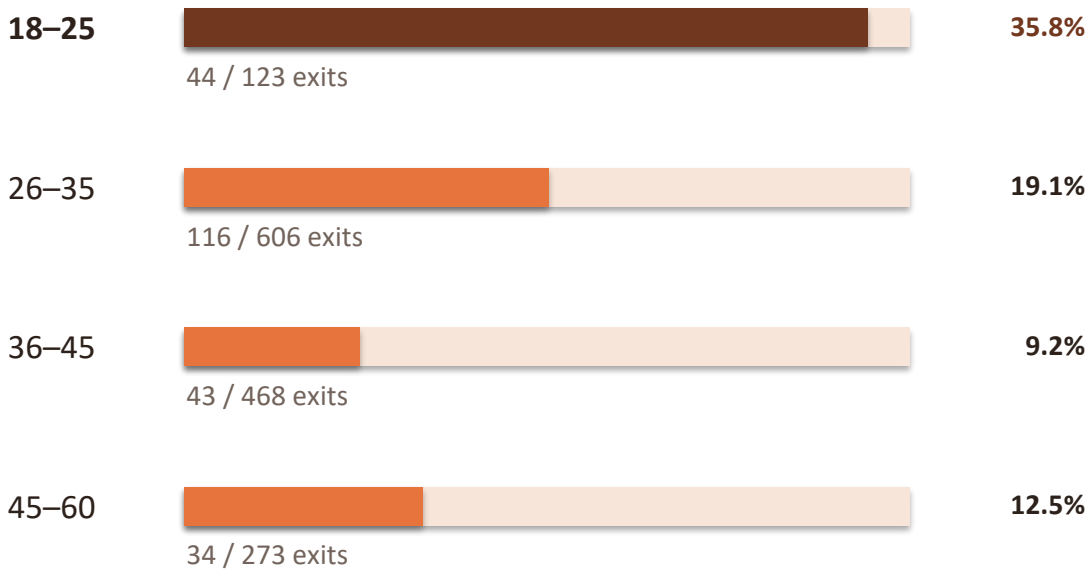

Review travel load, recovery time and employee support.

Age and Marital Status show significant signs of Attrition

Younger employees and single employees have higher observed attrition rates.

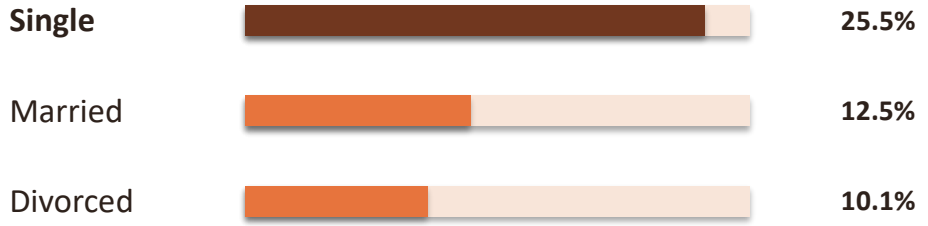

Attrition by age group

Rate plus exit count / group size

Other differences worth noting

MARITAL STATUS

GENDER

Male 17.0% **Female** 14.8%

The gender gap is 2.2 percentage points much smaller than the overtime or age-group gaps.

Where HR could focus next

Prioritize the largest gaps to understand what is actually driving attrition before committing to a policy change.

01

Review overtime exposure

Attrition is 30.5% for employees working overtime versus 10.4% for those who do not. Map overtime by role and team, then review staffing and workload.

02

Support early-career employees

The 18-25 group has a 35.8% attrition rate. Strengthen onboarding, mentoring and early check-ins; ask new hires what would make them stay.

03

Target high-risk roles

Sales Representatives have a 39.8% rate. Laboratory Technicians account for 62 exits. Use stay interviews and exit feedback to understand the different role-level patterns.

04

Investigate income and travel context

The under-3K band is at 28.6%, and frequent travellers at 24.9%. Compare these groups by role, job level and tenure before assuming pay or travel is the cause.
